COURSE, YEAR & SECTION: *BSIS-2B*

Week7_FullStackStarter

https://it-112-week7-fullstackstarter.onrender.com

In Week 7, I learned how to connect a front-end interface to an Express back-end and a MongoDB database to perform full CRUD operations. I practiced creating, reading, updating, and deleting user records dynamically while testing endpoints. A major challenge I encountered was deploying the application to Render and ensuring the database connection string and environment variables worked properly in production. I resolved this by inspecting the deployment logs and confirming my MongoDB connection was live. As an improvement, I verified that newly added users render immediately in the user list with clean action buttons. This laboratory gave me practical experience in building and deploying a live full-stack web application.
