Week4_JavaScriptBasicsDOM

In Week 4, I learned how to use JavaScript to interact with the DOM by creating dynamic features like a live digital clock and an interactive task list. I practiced adding event listeners to handle user actions such as toggling themes, adding new items, and removing tasks from the list. A challenge I encountered was making sure newly added tasks could be individually deleted without breaking the rest of the list. I resolved this by properly targeting parent elements and attaching removal functions to the delete buttons. As an improvement, I integrated theme-switching functionality to give the user interface better visual flexibility. This activity helped me understand how JavaScript handles real-time updates and user input on a web page.
