COURSE, YEAR & SECTION: *BSIS-2B*

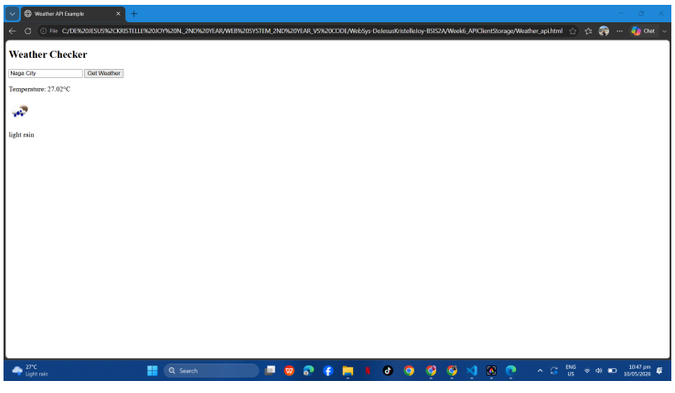

Week6_APIClientStorage

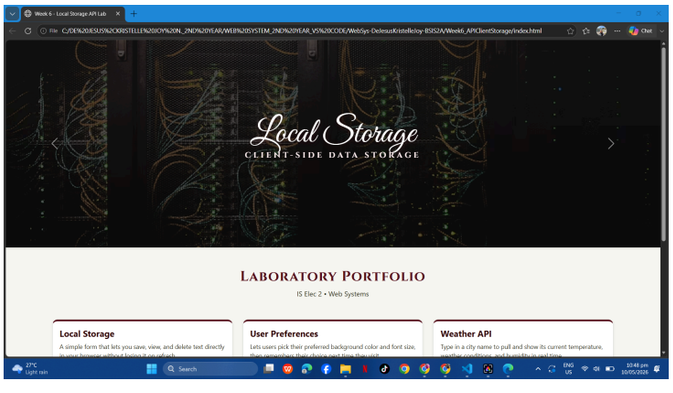

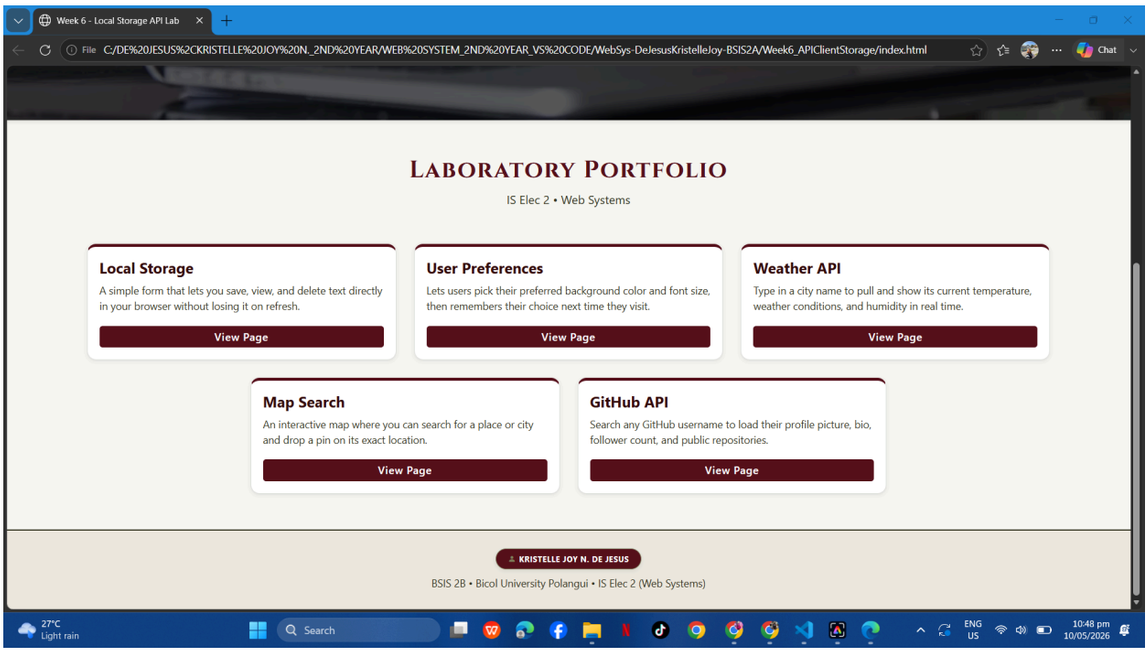

In Week 6, I learned how to integrate external APIs and manage client-side storage using JavaScript. I implemented multiple projects, including a Weather checker, Google Maps locator, GitHub user lookup, and local storage forms for user preferences. A major challenge I encountered was handling API keys and parsing asynchronous responses without blocking the user interface. I solved this by using fetch() with promises and checking API responses carefully in the developer tools console. To improve the overall laboratory, I built a centralized portfolio hub styled with my signature burgundy theme to seamlessly navigate between all five activities. This activity deepened my understanding of how front-end applications retrieve real-world data and persist settings across browser sessions.
