Week5_JSBootstrap

In Week 5, I learned how to use the Bootstrap framework to build a responsive website layout equipped with a navigation bar, image carousel, and structured grid cards. Working with pre-built components allowed me to create clean sections like the hero banner and service highlights much faster. A challenge I encountered was getting the carousel images and grid columns to align properly without stretching or breaking on different screen sizes. I solved this by utilizing Bootstrap's responsive grid classes and utility spacing instead of forcing fixed widths. As an improvement, I customized the layout with clear personal branding and cohesive cards to present services like Web Development and UI/UX Design neatly. This activity helped me appreciate how modern CSS frameworks simplify responsive web design.
